Abstract/Synopsis: Recent research has focused on the behavioural disturbances in dementia

patients. The authors review the literature on abnormal eating behaviour in dementia patients and then retrospectively examine a large cohort of dementia patients for such patterns. Thirteen per cent of these patients were found to have significant abnormalities in eating behaviour. These patients are described and possible aetiologies are discussed. A more thorough description of the non-cognitive symptomatology of dementia is considered important for future research on dementia syndromes.

6. Contracts, Grants, and Research

Educational, Funded/Active

Principal Investigator: Trinkle, D. B., Co-Investigator: Musick, D. W., Co-Investigator: Bishop, N. L., Co-Investigator: Harrington, D. P., *Southwest Virginia AHEC (Area Health Education Centers)*. Awarded 2018; May 15, 2018 - Present, Health Resources and Services Administration, \$50000.00. Additional Information: Partners Virginia Tech, Jefferson College of Health Services (Radford University) and Carilion Clinic were awarded the grant, location and budget to become the new Southwest Virginia AHEC. Involves federal Health Resources and Services Administration grant as well as some limited state funding through the Virginia Workforce Development Authority.

Grant, Completed

Trinkle, D. B., *Innovations in Collaboration Across Institutional Silos*. Awarded 2016; September 1, 2016 - 2017, \$3750.

Additional Information: Interprofessional education (IPE) faculty from UVA, JMU, VT and ODU, propose to use the 4-VA Telepresence Rooms, Labs, and "immersive" environments to consistently engage in collaborative sessions for developing, planning, implementing, and evaluating IPE experiences across institutions. Collaboration across institutions will allow a unique mix of health professions faculty and students to engage in IPE learning experiences that would not be possible within their school of enrollment alone. These collaborative sessions will be used to share IPE experiences and tools. Based on our collective experiences and expertise we will also plan an IPE simulation for healthcare students that can be shared by our diverse group of institutions. We will pilot test this simulation and may perhaps even implement this simulation synchronously to determine if interuniversity collaboration is beneficial as a tool to move the science of interprofessional education forward. Moreover, we will select or create tools to measure student learning outcomes from the experience with the goal of having a tool (or tools) which are feasible to use among our diverse universities. By collaborating across institutions to select a common set of measures for IPE experiences, we will begin to develop a large set of common data points allowing more ready comparison of IPE experiences and outcomes for students in diverse educational settings across the Commonwealth of Virginia. If this model of virtual collaboration utilizing telepresence is successful for planning, implementing, and evaluating IPE efforts replication at the national level could move the science of IPE forward at a much more rapid pace than ever before.
